

## 2 Pádhraig's Politeness Problem

(CPU:0.5sec - RAM:128MB)

Ireland has created a new taskforce to lobby other countries on climate change. Poor Pádhraig has been assigned to France and unfortunately is quite lost with the concept of *tu/vous* in French. To prevent any diplomatic incident from happening, Pádhraig was provided a diagram (see the figure below) on the appropriate usage of *tu/vous*. He needs himself and his team to be up to date with this. That is why you have been tasked with helping them figure things out!

**Input** The input will consist of two lines containing a fixed number of space-separated keywords. The first line provides keywords about you, and the second line about whom you are addressing. Keywords are provided in the following order:

- Name: literally any possible name (linked by a dash (-) instead of a space in case of a first and last name).
- Age: a number indicating the age of the person (a child is defined as being under 15, and a generation difference as 20 years of age difference).
- Social status: `commoner`, `Le-Google-employed`, `royal`, or `god`.
- Relationship to you (line 1) / them (line 2): `stranger`, `unsure`, `peer`, `family`, `friend`, `lover`, `spouse`, `father-in-law`, `teacher`, or `boss`.
- Rebellious status: `none`, `May-1968`, `Woodstock`, `ticked-off`.
- How lucky you/they feel: `not-lucky`, `lucky`.

**Output** The output should consist of a single line containing one of the three possibilities: `tu`, `vous` or `dunno` (if you don't know). Note: the answer will always be contained within the provided diagram.

### Sample Input 1

```
Jackie-Boy 20 commoner teacher none not-lucky
Milan-Boy 34 commoner peer none not-lucky
```

### Sample Output 1

```
vous
```

### Sample Input 2

```
Padhraig 65 commoner stranger Woodstock lucky
Yahweh 6000 god family Woodstock lucky
```

### Sample Output 2

```
tu
```
